PROFESSIONAL SUMMARY

Senior Python Backend Engineer and Technical Lead with 8+ years of experience designing scalable microservices architectures, low-latency RESTful APIs, financial transaction engines, and enterprise integration backends. Specialist in **Python 3.10+ (FastAPI, Asyncio, uvloop, Celery, SQLAlchemy 2.0, Pydantic v2, Django REST Framework)**, complemented by **Java (Spring Boot)** and **TypeScript / Node.js**, optimized persistence in **PostgreSQL (with pgvector), SQL Server, and Redis**, and cloud-native deployments on **Google Cloud Platform (GKE Autopilot, Cloud Run)**.

Proven track record driving the adoption of **Clean Architecture and Domain-Driven Design (DDD)**, automated test suites with **Pytest (>85% coverage)** under TDD, distributed observability (**OpenTelemetry, Prometheus, and Grafana**), and cloud financial optimization (**FinOps**).

TECHNICAL SKILLS & COMPETENCIES

- **Languages & Backend Core:** Python 3.10+ (Asyncio, Strict Type Hints, Concurrency, uvloop, Finite State Machines - FSM), Java (Spring Boot, JPA/Hibernate), TypeScript / Node.js, PowerShell & Bash Scripting.
- **Python Frameworks & Libraries:** FastAPI, Pydantic v2, SQLAlchemy 2.0 (Async Engine & ORM), Django / Django REST Framework (DRF), Celery, Alembic (Zero-Downtime Migrations), Flask, httpx, Uvicorn, Gunicorn, Pandas, Polars, PyArrow, GenAI / LLM Integration (Vertex AI, Gemini / OpenAI API, RAG, pgvector), Streaming APIs (SSE / WebSockets).
- **Databases, Caching & Messaging:** PostgreSQL (Declarative Partitioning, pgvector, JSONB, asyncpg, PgBouncer), Redis (Distributed Caching, Rate Limiting, Pub/Sub, Celery Broker), Microsoft SQL Server (2012–2022, T-SQL), Google Cloud Pub/Sub, BigQuery, MySQL, MongoDB.
- **Cloud, Containers & DevOps:** Google Cloud Platform (Cloud Run, GKE Autopilot, Compute Engine, Cloud Storage, Secret Manager, Cloud Armor, Cloud KMS), Docker (Multi-stage builds), Docker Compose, Terraform, ArgoCD, GitHub Actions, GitLab CI.
- **Architecture, Quality & Observability:** Microservices, Clean Architecture, Hexagonal Architecture (Ports & Adapters), Domain-Driven Design (DDD), Event-Driven Architecture (EDA, Dead Letter Queues - DLQ), Architecture Decision Records (ADRs), OpenAPI/Swagger, TDD/BDD (Pytest, Factory Boy, Jest), OpenTelemetry (OTel), Prometheus, Grafana, SonarQube, Trivy.

PROFESSIONAL EXPERIENCE

Senior Python Backend & Financial Automation Engineer | Reforest Latam

May 2026 – Present | Full-time (Remote)

- Architected and developed end-to-end the financial operations platform and transactional Telegram bot in **Python 3.11+ (aiogram 3.x, asyncio, Pydantic)** with **Redis-persisted FSM** state management (RedisStorage and events_isolation double-click protection), shared HTTP connection pooling (aiohttp), exact decimal accounting (ROUND_HALF_UP), real-time **fail-closed RBAC**, and **Baserow / Google Drive API** integration.
- Built an **atomic multi-currency bank reconciliation engine** featuring native PDF/CSV/Excel statement parsers (BBVA, Galicia, Macro, Mercury, Balanz), **SHA-256** deduplication in Redis, decoupled staging with semantic auto-classification, batch injection with **atomic batch rollback**, historical **MEP Dollar** exchange rate lookup with T-1 to T-5 business-day fallback, and sanitized **ARCA** tax exports.
- Implemented **dual LLM OCR & automated classification (**Gemini 2.5 Flash **and** DeepSeek **via OpenRouter)** using semaphore-bounded concurrent PDF chunking and prompt-injection sanitization; deployed on **Linux VPS with Docker Compose**, automated daily Drive backups, and **GitHub Actions CI/CD** running **Ruff** and **514 passing Pytest integration tests (100% green)**.

Senior Python, Cloud & Software Consultant | Independent Consulting & Enterprise Projects

January 2021 – Present | Strategic B2B Technology Consultant (Independent / Contract / Remote)

- **High-Concurrency Fintech & Trading Platforms (Clients under NDA):** Engineered asynchronous **FastAPI** middleware, credit-scoring microservices, and low-latency REST APIs in **Django REST Framework**; eliminated N+1 query bottlenecks using *SQLAlchemy 2.0 (*selective eager loading*), Pydantic v2, and Redis**, achieving a** >60% reduction in p95 latency on critical endpoints*.
- **Industrial Automation & Telemetry on GCP (Clients under NDA):** Developed ingestion microservices and data pipelines in **Java (Spring Boot) and Python** to synchronize logistics telemetry metrics and remote operational reporting on Google Cloud Platform.
- **Cloud Automation & Distributed Observability (Clients under NDA):** Automated GCP infrastructure provisioning with **Terraform and Python** (Shared VPC, GKE, Cloud Run, Cloud KMS) and deployed full-stack observability with **OpenTelemetry, Prometheus, and Grafana (-45% MTTR)**.

Senior Software Engineer & Database Administrator (DBA) | University of Buenos Aires (UBA)

March 2018 – February 2024 | Institutional Systems Specialist (Part-time / Buenos Aires, Argentina)

- Engineered concurrent asynchronous **Python, SQLAlchemy, and Bash** microservices and ETL synchronization pipelines across **8+ TB of institutional data (+500 GB migrated from critical legacy databases)** serving **+50,000 users (+10,000 concurrent active users)**, reducing **manual operational effort by 60%** and batch windows from hours to minutes.
- Implemented schema version control with **Alembic** and tuned complex queries on **PostgreSQL and SQL Server**, achieving a **55% reduction in p95 query latency (-40% average response time)** with **RPO < 15 min and RTO < 1 hour**.

Systems Infrastructure & Operations Coordinator | Government of the City of Buenos Aires (GCBA)

January 2020 – December 2023 | Ministry of Economic Development (Full-time / Buenos Aires, Argentina)

- Established technical interoperability standards and automated backend validation layers that reduced **cross-departmental data inconsistencies by 40%**, maintaining a **99.9% uptime SLA** and **-30% production incidents** for **100,000+ monthly users** across **SQL Server, PostgreSQL, MySQL, and MongoDB**.

FEATURED PROJECTS & HACKATHONS

- **Autonomous FinOps Engine (Aleph Hackathon 2026):** Autonomous **Python** engine that scans Google Cloud environments to detect idle resources and automatically generates **Terraform (IaC)** remediation code.
- **OmniSync (Event-Driven Architecture - EDA) & Monitor CI/CD (DORA):** Polyglot engine featuring eventual consistency, compensating events, and **Dead Letter Queues (DLQ)**, plus a real-time TypeScript/Node.js/WebSockets CI/CD monitoring platform.

EDUCATION, CERTIFICATIONS & LANGUAGES

- **Education: Associate Degree in Information Systems** | UTN *(In Progress — Expected Graduation: Dec 2027)* · **Bachelor's Studies in Labor Relations & HR** | UBA *(Advanced University Coursework Completed / Organizational Leadership)*.

  - *Certifications* (Verifiable on Credly & Coursera):* Meta Back-End Developer Certificate | IBM DevOps and Software Engineering Professional Certificate | IBM Java Developer Professional Certificate (V2) | IBM JavaScript Backend Developer (V2) | IBM Full Stack Software Developer (V5) | Meta Full-Stack Engineer | Google Data Analytics.
- **Languages: Spanish:** Native · **English:** Professional Working Proficiency (B2 — Fluent technical communication for live engineering syncs, RFCs, and documentation).
