

# GUILLERMO FERNANDO FARFÁN ROMERO

## Senior Python Backend Engineer & Cloud Architect

Argentina (Available for hybrid work in Buenos Aires) | +54 9 11 2187 1473 | fernando.farfán16@gmail.com

---

### PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer and Cloud Architect with over 8 years of experience in the IT industry. Specialized in designing highly scalable REST/GraphQL APIs, enterprise ERP engineering, and advanced automation utilizing Python (FastAPI, Django), Java, and Google Cloud Platform (GCP) ecosystems. Proven track record leading complex technical migrations, orchestrating high-availability Kubernetes (GKE) clusters, and integrating AI-driven observability solutions for enterprise clients across fintech, trading, logistics, and industrial sectors.

---

### CORE SKILLS

**Languages & Frameworks:** Python, FastAPI, Django, Django REST Framework, Flask, Java, Node.js, Express, JavaScript, TypeScript, SQLAlchemy, Celery, Pandas

**Cloud & Infrastructure:** Google Cloud Platform (GCP), Google Kubernetes Engine (GKE), Terraform (IaC), Migrate to Virtual Machines (M4CE), Shared VPC, Cloud NAT, Identity-Aware Proxy, Docker, Docker Compose, Linux VPS

**Databases & Data:** PostgreSQL, MySQL, MongoDB, SAP HANA, SQL Server, Oracle, Baserow

**Observability & AI:** IBM Instana APM (Smart Alerts, Dynamic Graph, Unbounded Analytics), AI-assisted monitoring, LLM integration

---

### PROFESSIONAL EXPERIENCE

#### Technical Lead & Full Stack Developer — Reforest Latam *May 2026 – Present*

*Full-time / Relation of Dependence.*

- **Architecture & Finance Automation:** architected a transactional Telegram bot powered by Python and Finite State Machines (FSM) for automated real-time financial tracking, accounting, and expense validation.
- **ERP Modernization:** directed the technical design and deployment of the company's central ERP system, successfully migrating fragile legacy workflows into a highly secure, relational database environment hosted on Linux VPS using Docker and Docker Compose.
- **Data Orchestration:** formulated robust multi-currency bank reconciliation pipelines (ARS/USD) integrating n8n, Baserow as a single source of truth, and custom Python synchronization scripts.

#### Senior Python, Java & Cloud Solutions Engineer — Independent Contractor *November 2021 – Present*

*Project-based corporate consulting & technical architecture.*

##### **Grupo Ramos — Cloud Migration & Architecture**

- Led the end-to-end lift-and-shift migration of 36 critical production virtual machines (Windows & SQL Server) from on-premise VMware environments into GCP using Migrate to Virtual Machines (M4CE).
- Designed and provisioned the enterprise cloud landing zone infrastructure using Terraform (IaC) across Development, QA, and Production environments under a secure Shared VPC architecture (Zero Public IP, Cloud NAT, and Identity-Aware Proxy).
- Architected high-availability containerized deployments by orchestrating Google Kubernetes Engine (GKE) clusters (Standard and Autopilot topologies) connected directly to the corporate shared network.
- Deployed high-performance SAP CAR Rise infrastructure on GCP utilizing computing families (m3/c4d), Hyperdisk Balanced storage, and OS optimization for SUSE Linux Enterprise Server (SLES).

##### **Ecovalores / Matriz OMS Integration — Fintech & Trading**

- Designed high-concurrency middleware using FastAPI to interface with institutional trading systems and Matriz OMS protocols for automated order routing and real-time market data extraction.
- Developed asynchronous Python worker pipelines using Celery and SQLAlchemy to process large volumes of transaction logs and settlement data under strict security compliance standards.

### **Ganfeng Lithium — Industrial & Mining Supply Chain Automation**

- Built and deployed custom automated tracking services and internal data pipelines using Java to synchronize logistics, industrial procurement metrics, and remote operations reporting.
- Integrated localized relational database nodes with central cloud infrastructure on GCP, ensuring system resilience and network availability in low-connectivity environment topologies.

### **Junta de Beneficencia de Guayaquil — AI Observability**

- Served as Senior Consultant directing the standalone technical audit, design, and full deployment of IBM Instana APM for high-throughput transactional apps running on Nutanix AHV hyperconverged infrastructure.
- Built intelligent alerting ecosystems by implementing AI-powered Smart Alerts and Application Perspectives, reducing false positives and operational alert fatigue.
- Conducted advanced engineering training covering code-level software instrumentation, Unbounded Analytics, and system performance bottleneck detection.

### **SeSocio — DeFi API Modernization**

- Designed and optimized high-concurrency, low-latency RESTful APIs using Django REST Framework to manage high-volume portfolio transactions and crypto-asset routing.
- Incorporated robust asynchronous background jobs and message brokering for the financial ecosystem, ensuring non-blocking executions for end-of-day market reconciliations.

### **Sirena / Zenvia — GraphQL Gateway (Omnichannel Data)**

- Architected a GraphQL data layer over legacy SQL databases to provide mobile tracking applications with real-time commercial metrics and messaging compliance statuses.

### **Wenance — Credit Risk Automation (Backend Microservices)**

- Engineered high-throughput backend microservices in Python (FastAPI) to asynchronously process complex credit scoring algorithms and user validation pipelines.
- Integrated external banking APIs to validate financial histories, ensuring robust data parsing and failover mechanisms during high-traffic lending windows.

### **Linio / Falabella — E-Commerce Decommissioning (API Routing & Extraction)**

- Developed robust routing APIs and data extraction scripts in Python to safely decouple, map, and migrate legacy inventory databases during the platform's architectural transition and sunset phase.

### **Technical & Digital Analyst — SupraBrokers** *July 2025 – August 2025*

- Engineered high-volume commercial data processing pipelines using Pandas for data cleansing, validation, and ETL tasks.
- Automated internal operations via Python scripts and Google Apps Script, achieving a 60% execution time reduction across recurring processes.

### **Technical Mentor — Coderhouse** *July 2022 – September 2022*

- Mentored advanced students on frontend integrations, React.js, JavaScript best practices, and version control workflows using Git, achieving a 95% academic success rate.

### **DBA & Technical Coordinator — GCBA, UBA & Defensoría del Pueblo** *2018 – 2024*

- Managed enterprise relational database administration (DBA), partition planning, infrastructure support, and cross-departmental technical coordination.
- This period provided the core engineering, database performance tuning, and systems foundation that transitioned into full-time Senior Python Backend development.

## **EDUCATION**

---

### **Associate Degree in Systems / Tecnicatura Universitaria en Sistemas — UTN (Universidad Tecnológica Nacional)**

*In Progress, 2024 – 2027*

### **Bachelor's Degree in Labor Relations — UBA (Universidad de Buenos Aires)**

*Graduated, March 2016 – December 2024*

## HACKATHONS

---

- Aleph Hackathon (March 2026) — Developed the Autonomous-FinOps-Engine.
- Avalanche LatAm Hackathon (May 2026) — Built decentralized backend architecture and transaction verification systems.
- PunaTech Hackathon (May 2026) — Developed automated telemetry tracking modules and cloud data connectors.
- ETH Kipu / LatAm Hackathon (November 2025) — Designed smart contract automation workflows and Python API adapters.
- HackITBA (March 2024) — Developed a real-time data processing backend using FastAPI and Docker containers.
- ETH Latam / Buenos Aires Hackathon (August 2023) — Built decentralized identity and authentication middleware in Python.
- Space Apps Challenge / NASA Hackathon (October 2022) — Developed satellite telemetry data visualization and analysis pipelines using Python and Pandas.

## TECH CERTIFICATIONS

---

- Meta: Full Stack Developer Specialization (Front-End & Back-End from Scratch) (2025)
- Meta: Back-End Developer Professional Certificate (2024)
- IBM: Full Stack Software Developer Professional Certificate (2025)
- IBM: DevOps and Software Engineering Professional Certificate (2025)
- IBM: Java Developer Professional Certificate (2025)
- IBM: Back-End Development Professional Certificate (2025)
- IBM: JavaScript Backend Developer Professional Certificate (2025)
- IBM: Front-End Developer Professional Certificate (2024)
- IBM: IT Scrum Master Professional Certificate (2024)
- Google: Data Analytics Professional Certificate (2024)
- Board Infinity: .NET FullStack Developer Specialization (2024)
